Working Principle

The twin tub semi automatic washing machine working principle of the wave wheel washing machine is that the motor drives the wave wheel to rotate through the belt deceleration, and the timer or computer controls the wave wheel to stir the water, detergent and clothes. The washed clothes, under the mechanical action of the wave wheel rotation and the chemical action of the detergent water solution, knead the clothes through the positive and reverse reciprocating stirring and rubbing in the washing bucket to achieve the purpose of removing stains and washing clothes.
